Purity User Info: puresetup

The puresetup user allows for easier install of Pure Storage arrays.

Overview

The puresetup user adds the ability to run a few extra commands that are necessary to install and set up Purity for the first time.

- The puresetup user has access to the following commands:
 - All *pureuser* commands
 - The following additional commands:

```
pureinstall
puresetup
pureboot
mount
umount
```

- This user can run `ls` to list out partitions and directory contents.
- For this user the kernel prohibits all network access, so ssh peer is not available.
- This user will not be able to access any customer data.
- After a reboot following puresetup newarray, this user will no longer exist.

Credentials

The credentials for this user are as follows:

username: puresetup

password (including spaces): embind anecdota praiser obelize

The install process is outlined here: https://support.purestorage.com/FlashArray/PurityOE/Purity_Upgrades/01_Upgrading_Purity/Array_Install%3A_Changing_Purity_Version_on_a_Fresh_Array

puresetup and Upgrading

Do not use puresetup user to upgrade an array. This user only allows installs on a new or fresh array where Purity hasn't been started yet.

Purity does not support downgrades. Installing a lower version of Purity (compared to what was shipped from manufacturing) on a new or fresh array is not considered a downgrade in this case. However, if you install a version of Purity that is lower than 4.8.x, the puresetup user will not exist and the previous challenge-signer method must be used - therefore, installing a version of Purity prior to 4.8.x via this user is not recommended.

Additional Information

Output of puresetup newarray
